

## System100

### Closed back cabinet front-loaded horn 4way sound system

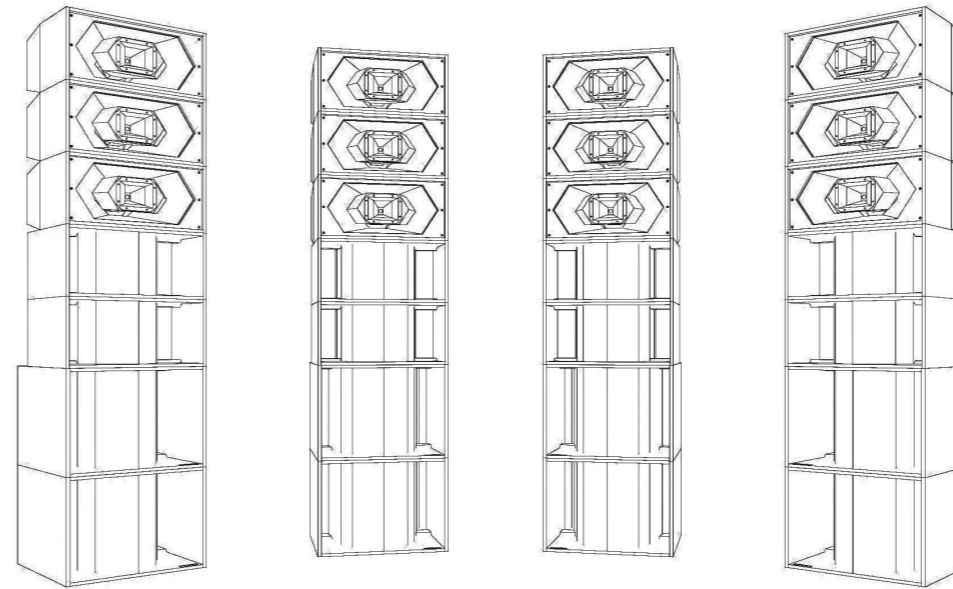

System 100 is Kannonaudio's first speaker system.

Designed for use in large clubs, outdoor festivals, etc.

Closed back cabinet front-loaded horn adopted for this system

The sound is soft and clear treble and high pressure bass, the reproduction power of the three-dimensional sound image of the front-loaded horn, and Kannonaudio's unique uncompromising design and adjustment make it a very natural and organic sound.

System 100 provides quality that many people can be satisfied with.

### Detail

System100 consists of treble + midrange Model 101, mid-low range Model 102, and bass range Model 103, all of which use a closed back cabinet front-loaded horn.

#### Model101

Model 101 in the treble + midrange uses a 1.4-inch neodymium tweeter driver and an 8-inch neodymium speaker driver, bi-amp drive, and the tweeter and speaker driver are placed on the same line to form a pseudo coaxial.

Directivity angle is vertical 25 °, horizontal 75 °

Since all Unit drivers are located inside the enclosure, it is a structure that will not be damaged by a little rain.

There are two types, an installation model and a touring model.

The installation model has a shape that facilitates ground stacking

The touring model comes with metal fittings that allow flying and ground stacking.

In addition, a special case is sold separately as an option.

#### Model102

Model 102 in the mid-low range uses a 10-inch neodymium speaker driver, and the sound produced by the closed back cabinet and the sound aggregated by the front-loaded horn achieve high response and high sound pressure.

Directivity angle is horizontal 90 °

In this model as well, the driver is placed inside the enclosure, and the enclosure is equipped with parts that suppress water ingress at the middle point of the lower inside of the horn, so it is a structure that will not be

damaged if it rains a little. ..

There are two types, an installation model and a tour model.

The installation model has a shape that facilitates ground stacking

The tour model comes with metal fittings that allow flying and ground stacking.

In addition, a special case is sold separately as an option.

#### Model103

The bass model 103 uses an 18-inch neodymium speaker driver, and the sound produced by the closed back cabinet and the sound aggregated by the front-loaded horn realize high response and high pressure bass.

In this model as well, the driver is placed inside the enclosure, and the enclosure is equipped with parts that suppress water ingress at the middle point of the lower inside of the horn, so it is a structure that will not be damaged if it rains a little. ..

There are two types, an installation model and a tour model.

The installation model has a shape that facilitates ground stacking

The tour model comes with a handle and wheels for transportation.

A soft cover is included.

Each of these System 100 models is designed to be lightweight and compact so that it can be transported by one person, making it easy to transport, install, and save space. Venue with narrow entrances and venues with stairs going up and down can be easily installed by human power alone.

Model101, Model102, Model103 all have the same width and the sound axis is in the center of the front, so you can set up a smart appearance, and the time alignment is also corrected by the speaker processor, so you can easily align the entire sound axis. It is designed so that it can be done.

The size of each model is designed to fit tightly into the truck bed.
